

# Enidine Shock Absorbers – Our complete range.

The Enidine quality, proven by experience, distributed exclusively by LDA

The Enidine logo consists of the word "ENIDINE" in a bold, red, sans-serif font. The letters are closely spaced and have a slight shadow effect. The logo is enclosed in a thin black rectangular border.

## Enidine: A Legacy of Quality and Innovation

Enidine is a brand with a rich history that has consistently prioritized quality throughout the years. Since 2007, Enidine has been part of the ITT product range. ITT, a renowned and strong American group, has leveraged its resources to further enhance the level of quality and innovation within the Enidine brand. The results were immediate: Enidine became a key supplier for critical markets such as aerospace, defense, and industrial sectors. Enidine shock absorbers are used in airplanes, offshore platforms, wind turbines, and a variety of other demanding applications.

From micro-bore to heavy-duty shock absorbers, Enidine offers them all.

Enidine provides shock absorbers for all types of applications. Its product range includes micro-bore, small-bore, mid-bore, large-bore, and heavy-duty shock absorbers. Additionally, specialized "industry" shock absorbers, rubber buffers, and wire ropes for vibration isolation are also part of the Enidine product range available at LDA.

A significant portion of the product line is available in both fixed and adjustable versions.

## The ECO Revolution

The introduction of the first environmentally friendly Enidine ECO shock absorbers has revolutionized the industrial shock absorber market.

By using eco-friendly materials and fluids, the ECO series stands out in the industry. Its extensive selection makes it suitable for a wide range of industrial applications. Whether dealing with low-speed/high-force or high-speed/low-force applications, the new ECO series will always meet your expectations.
