

ENIDINE: PXR Series Compact Shock Absorbers

STABLE, RELIABLE PERFORMANCE IN A SMALL SHOCK ABSORBER PACKAGE

Enidine PXR Series small bore non-adjustable hydraulic shock absorbers can accommodate a large array of energy input conditions. This new expanded line of tamperproof industrial shock absorbers provides consistent performance, cycle after cycle. The new PXR models are designed to absorb maximum energy within a compact envelope size while providing you with stable performance over the life of the product.

The PXR Series uses a self-compensating design to provide energy absorption in low velocity and high drive force applications. The PXR Series also includes the added benefit of corrosion-resistant, nickel-plated components and positive stop capabilities. Models can accommodate a wide range of operating conditions with varying masses or propelling forces.
