

Flexible tanks
Civil protection

FIRE TANKS

Up to **70% cheaper** than traditional solutions

For a number of years, **PRONAL** has been developing a range of **flexible tanks designed for the protection of buildings** against fire risks. **Approved by the emergency response services, compliant with current standards and with the French Interministerial Circular of 1951**, our fire tanks are **the best solution to secure the protection of your infrastructures at minimal cost.**

Examples of applications:

- Protection of isolated sites
- Rapid standard compliance for industrial or agricultural sites
- Creation or extension of factories
- Creation or extension of commercial areas

Main advantages:

- Long service life
- No planning permit required
- No structural work required
- Useful capacity storage

360m³ tank - 14,98m x 19,50m

240m³ tank - 8,56m x 13m

200m³ tank - 11,77m x 14,69m

150m³ tank - 9,63m x 13,97m

More than **50-years**
experience to serve
your projects

French company
worldwide recognized

ISO 9001 version 2008
certified

Network of more than
90 specialized
partners

Thousands tanks
installed over the world

Flexible tanks from
1 to 1000 m³

10 year
guarantee

Integrating
global solutions
(Installation, pumps, treatment...)

STORAGE OF FIRE FIGHTING WATER

Installation of a **500m³** tank within 4 hours

The regulations governing **ground pollution control when pollutant-containing fire fighting water is discharged** are changing regularly. **It is now compulsory to collect this water so that it can be treated and in accordance with fire fighting systems.**

Examples of applications:

- Extension of existing basins
- Retention of road run-off water following an accident
- Protection of residential areas
- Protection of commercial areas

Main advantages:

- Simple and quick to deploy
- Low investment
- High resistance to poor weather conditions
- Compatible with traditional fire brigade couplings

OPEN STORAGE TANKS

Some tanks have been in service for more than 20 years

Flexible “onion tank” type tanks are effective in emergency deployment operations. In comparison with sealed flexible tanks, they offer the advantage of quick **filling from above** and a **complete cleaning of the inside**. **Lightweight and foldable, they are easy to transport from one site to another.**

Examples of applications:

- Storage of fire fighting water
- Buffer storage of chemical effluents prior to treatment
- Settling basin
- Recovery of hydrocarbons during marine pollution incidents

Main advantages:

- Rapid deployment
- Transportable
- Filling from above
- Inflatable or foam float
